-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/28/07 has been entered.

Terminal Disclaimer

2. The terminal disclaimer filed on 12/28/07 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of U.S. Patent no. 6,650,660 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Response to Arguments

3. Applicant's arguments with respect to claims 1-7, 11-17, 21, 23-26, and 28-30 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1, 5, 11, 15, 21, and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Bleickardt et al. (5,461,622).

Regarding claims 1, 11, 21, and 26:

Bleickardt et al. disclose a method and apparatus for processing packets of data comprising the steps of:

splitting each packet into a first portion and a second portion; associating a first code with the first portion of data for each packet; associating a second code with the second portion of data for each packet;

for each packet of data, storing the first portion of data, and its associated first code; for each packet of data, storing the second portion of data and its associated second code; and

retrieving one of the first portions of data and its associated first code, retrieving one of the second portions of data and its associated second code, determining by the codes whether the first and second portions of data were generated from the same packet of data, and if the first and second portions of data were generated from the same packet of data, combining them to regenerate the packet of data (the abstract and col. 7 line 67 to col. 8 line 12 recite splitting a STS super frame for transmitting on plural STS frames; col. 3 lines 22-36 recite the use of the A1, A2 framing bytes and the H1, H2 pointer bytes to realign, regenerate, and properly recombining the STS frames to reform the original STS super frame; Fig. 5 and col. 6 lines 16-49 shows and recite the recombining of the STS frames to reform the original super frame as in claims 1, 11, 21, and 26).

Regarding claims 5 and 15:

Bleickardt et al. disclose wherein the codes for like portions of successive packets of data are set to a series of values which repeats periodically (col. 3 lines 22-36 recite the byte repeats a specific pattern with a 64 frame period clearly reads on codes which repeats periodically).

Allowable Subject Matter

6. Claims 2-4, 6-7, 12-14, 16-17, 23-25, and 28-30 would be allowable if rewritten to include all of the limitations of the base claim and any intervening claims.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
Sands et al. disclose an apparatus and method for detecting frame synchronization pattern/word in bit-stuffed digital data frame.

Follett discloses a high speed switching architecture.
Redman discloses TDM bus synchronization circuit and protocol and method of operation.
